SUMMARY

Aspiring Data Science and full stack engineer in Final year , B.Tech student with experience in data science, MERN stack and generative AI. Proficient in Java, SQL, Python, Go. Passionate about leveraging advanced analytics, AI and IOT and Embedded System.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript (ES6+), TypeScript, Java, Golang , HTML , CSS

Data & Analytics: Statistical Modeling, Predictive Analytics, Customer Behavior Analysis, Risk Analytics

Backend: Node.js, Express.js, REST APIs, Microservices, Docker, Git, PostgreSQL, MongoDB, Redis

EXPERIENCE

IT Intern – Paper Theory

May 2026 – Aug 2026

Pune, India

- Developing and maintained a healthcare portal using React, Next.js, Node.js, FastAPI, and PostgreSQL, enabling patient management, appointment scheduling, and healthcare service workflows.
- Built software solutions for a mining company to streamline inbound delivery and logistics management, improving shipment tracking, inventory visibility, and operational efficiency.
- Designed and implemented a veterinary healthcare application for veterinary hospitals, supporting pet registration, medical records management, appointment booking, and treatment tracking
- Developing REST APIs and backend services, integrated database systems, and collaborated with cross-functional teams to deliver scalable, user-centric enterprise applications.

PROJECTS

Smart Environmental Monitoring System

🌐 GitHub Jan 2026 – Mar 2026

Python, FastAPI, React, TypeScript, ESP32

- Developed an AI-powered indoor health monitoring system integrating ESP32 with multi-sensor data acquisition including PM2.5, PM10, VOCs, CO2, temperature, humidity, light, and noise for real-time environmental analysis.
- Built data processing and calibration pipelines using Python, NumPy, and Pandas; implemented AQI scoring and sensor calibration algorithms to improve environmental reading accuracy and reliability.
- Designed a backend using FastAPI and REST APIs for real-time sensor ingestion, historical trend analysis, and intelligent alert generation with cooldown-based notification handling.
- Integrated predictive analytics and Gemini AI-powered health recommendations using historical environmental data, enabling proactive indoor air-quality monitoring and anomaly detection.

Mining Operations and Logistics Platform

🌐 GitHub Jun 2026 – Jul 2026

MongoDB, Express.js, React, Node.js

- Developed a full-stack mining operations platform using the MERN stack to digitize blast-operation bookings and stockpile inventory management across mine sites, replacing manual tracking workflows.
- Designed MongoDB schemas and RESTful Express APIs for bookings, plants, and inventory data, enabling real-time inbound shipment tracking and inventory visibility for logistics operations.
- Architected cross-application data sharing between the mining platform and a connected docket-management system on a shared MongoDB cluster, evaluating REST API, direct database reads, and Change Streams for synchronization.

EDUCATION

VIT Bhopal University

Aug 2023 – Sept 2027

B.Tech, Computer Science Engineering (Cyber Security & Digital Forensics) |

CGPA: 8.3

CERTIFICATIONS

Blockchain Certification – NPTEL

April 2025

Certified Ethical Hacker (CEHv12) – EC-Council

January 2025

Bits and Bytes of Computer Networking – Coursera

January 2026
