TECHNICAL SKILLS

Languages: Java , Python , Golang

Frontend: HTML , CSS , JavaScript

Databases: MongoDB ,SQLite , PostgreSQL

Backend: Node.js , express.js , REST APIs

EXPERIENCE

IT Intern – Thread and Core Systems

May 2026 – Aug 2026

Pune, India

- Developing and maintained a healthcare portal using React, Node.js and PostgreSQL, enabling patient management, appointment scheduling, healthcare service workflows and Stock Management.
- Streamlined inbound delivery and logistics for a mining company by building SAP ERP-integrated solutions, improving shipment tracking, inventory visibility, and overall operational efficiency.
- Designed and implemented a veterinary healthcare application for veterinary hospitals, supporting pet registration, medical records management, appointment booking, and treatment tracking

PROJECTS

InsurRenew Pro AI Insurance Renewal Agent — Rest APIs , twilio SMS , Slack Webhooks 📺 Jun 2026 – Aug 2026

- Configured and customized a bilingual (English/Hindi) AI insurance renewal agent on the Inya.ai platform, using a Knowledge Base for contextual policy information and multi-turn customer conversations.
- Designed modular prompt-engineering workflows for insurance renewals, objection handling, intent and sentiment-based responses, callbacks, and eligibility-driven policy upselling.
- Integrated Twilio SMS APIs for renewal/payment links and Slack Webhooks for real-time human-agent escalation, enabling multi-intent actions within a Prompt–Actions–Integrations workflow.

Veterinary Clinic Management System — Node.js , express.js , MongoDB 📺

may 2026 – jun 2026

- Built an end-to-end veterinary workflow — clinic admin books appointments, doctor records live consultations via speech-to-text, AI generates structured SOAP notes with prescriptions, and automated emails notify pet owners with follow-up booking links.
- Designed a multi-tenant architecture with role-based views (Superadmin, Admin, Doctor) where each clinic's data is automatically isolated so clinics cannot access each other's records.
- Built a vaccination tracker that automatically calculates due dates, detects overdue vaccines, and sends email reminders to pet owners without any manual intervention.

Smart Environmental Monitoring System — Python, React, ESP32 📺

Jan 2026 – Mar 2026

- Developed an AI-powered indoor health monitoring system integrating ESP32 with multi-sensor data acquisition including PM2.5, PM10, VOCs, CO2, temperature, humidity, light, and noise for real-time environmental analysis.
- Built data processing and calibration pipelines using Python, NumPy, and Pandas; implemented AQI scoring and sensor calibration algorithms to improve environmental reading accuracy and reliability.
- Designed a backend using FastAPI and REST APIs for real-time sensor ingestion, historical trend analysis, and intelligent alert generation with cooldown-based notification handling.
- Integrated predictive analytics and Gemini AI-powered health recommendations using historical environmental data, enabling proactive indoor air-quality monitoring and anomaly detection.

EDUCATION

Vellore Institute of Technology

Aug 2023 – Sept 2027

B.Tech , Computer Science Engineering (Cyber Security & Digital Forensics) |

CGPA: 8.3

CERTIFICATIONS

Blockchain Certification – NPTEL

April 2025
